The warehouse industry is changing.
Can your operations keep pace?

**76%** increase in volume of items ordered by 2020 [1]

83% increase in items shipped by 2021 [1]

89% of executives agree e-commerce is driving the need for faster delivery [2]

Legacy mobile devices
Not made for the pace of e-commerce

device error

Outdated Windows® mobile operating systems, developed long before the e-commerce revolution, can't handle today's fulfillment demands and security risks.

Zebra Android devices
Accelerates e-commerce fulfillment

Modern Android operating systems are built for today's on-demand economy and offer up to seven years of security support, making them the best choice for daily operations.

Downtime

- Slower task completion
- Less intuitive, green screen push-button devices
- Battery change prompts cold reboot that creates downtime, lost productivity
- Lack of replacement parts leads to retired devices and slower operations

Uptime

- 40% faster data entry and 60% fewer errors with touch screen [3]
- Fast charging, hot swap batteries keep devices running
- Readily available replacement parts help maintain business continuity.

Hamper training efforts

Longer training cycles due to a slow, unfamiliar interface and cumbersome navigation costs valuable time.

Enhance training efforts

Slash training time with a user interface that's already familiar to workers.
